

“ Dirac, Emancipador e Transgressor ”

CBPF

(Ospedal – Helayël)

MAR 2019

Importante esclarecer a apresentação

- **Que Dirac pretendo apresentar**
[Dirac, emancipador? Dirac, transgressor?]
- **A partir de quais referenciais**
- **Com que propósitos**
[*Dirac nos traz lições em muitas frentes.*]

A mágica noite de 12 de Agosto de 1982 em Erice

- Zichichi e Salam organizaram a inesquecível noite “My Life as a Physicist”:
- Wigner
- Dirac
- Yang (Festa dos 60 anos; 1º OUT 1922).

Paul Adrien Maurice Dirac em 3 notas:

- impressionante **intuição física**
- incomparável **capacidade de criar nova Matemática** para **gerar nova Φ** (o Dirac filosófico)
- e, importante: um claro **posicionamento político**, com **importante consequência para a Φ** .

Dirac e os 3 anos decisivos para a elaboração do Modelo-Padrão

- **1925 – 1926**

Dirac lança as bases da **Mecânica Quântica**

- **1926 – 1927**

As bases da **Teoria Quântica de Campos**

- **1927 – 1928**

As bases da **Física de Partículas Elementares**

**Os alicerces do
Modelo-Padrão da Física de Partículas.**

O 1º momento com a Mecânica Quântica

- Dirac chega a Cambridge em 1923 ~ **Ralph Fowler**
- **AGO 1925:** Fowler recebeu as “proof-sheets” do trabalho ainda não publicado de Heisenberg - o 1º esboço da MQ – e o passa imediatamente a Dirac, que mergulha no material, repropoando a **Mecânica Matricial** de Heisenberg em termos dos chamados **q-numbers**.
- **NOV 1925**, “**The fundam’l eq’ns of QM**”, PRS 109 (NOV’25) 642.
- **MAI 1926**, PhD Thesis, “**Quantum Mechanics**”.
- **AGO 1926**, “**On the theory of QM**”, PRS 112 (AGO’26) 661.
- **DEZ 1926**, “**The physical interpretation of the quantum dynamics**”, PRS 113 (DEZ’1926) 621.

A Relação $\Phi - M$:

peça fundamental para compreender Dirac na Φ

- **Bacon:**

“For the things of this world cannot be made known without a knowledge of Mathematics.”

- **Russel:**

“Mathematics, rightly viewed, possesses not only truth, but supreme beauty.”

- **Dirac:**

“Beauty is the method.”

The Relation between Mathematics and Physics
PRS (Edinburgh) 59 (1938-1939), Part II, p.122.

A Relação Φ - M

- *“Mathematics is a part of Physics. Physics is an experimental science, a part of natural science.
Mathematics is the part of Physics where experiments are cheap.”*
V. I. Arnold, matemático russo (1937 – 2010).
- *“The physicist, in his study of natural phenomena, has two methods of making progress: (1) the method of experiment and observation, and (2) the method of mathematical reasoning. The former is just the collection of selected data; the latter enables one to infer results about experiments that have not been performed.”*
P. A. M. Dirac (1902 – 1984).
- **Φ – M: nova Matemática** para trabalhar os nossos problemas, e não criar novos problemas para a Matemática tradicional.

Crítica Genética

- **L. Hay, 1979: « Les Essais de critique génétique ».**
- Inicia-se como acompanhamento crítico do processo de criação na Literatura.
- Na década de '90, estende-se para demais áreas: abordagem para a obra a partir da consulta e análise de documentação referente [*documentos de processo*] ao trabalho de criação:

diários, esboços, anotações, correspondências, marginais, entrevistas, roteiros, contatos.

Crítica Genética

- O que está em questão **não é a obra em si**, mas **sim o processo de construção da obra**; **as grandes questões no contexto deste processo.**
- Busca-se detectar e compreender os procedimentos que possibilitam a concepção.
- E. Morin (“A inteligência da complexidade”, pág. 23): ***“Arte de transformar detalhes aparentemente insignificantes em indícios que permitam reconstruir toda uma história.”***

Dirac, a Gênese do Modelo-Padrão

Dirac/Beethoven, Simplicidade e Eternidade

Dirac/Einstein, Simplicidade e Estética

$$(\mathbf{i} \Gamma^\mu \partial_\mu - \mathbf{m}) \psi = \mathbf{0}$$

$$\mathbf{R}_{\mu\nu} - \frac{1}{2} \mathbf{g}_{\mu\nu} \mathbf{R} = \mathbf{0}$$

Dirac/Stein, Simplicidade e Poesia

Rose is a rose is a rose is a rose
Loveliness extreme.
Extra gaiters,
Loveliness extreme.
Sweetest ice-cream.
Pages ages, page ages, page ages.

(**Gertrude Stein**, “Sacred Emily”, in *Geography and Plays*)

Simplicidade e Estilo: Dirac, um estilista da Φ ?
Dirac buscou a beleza e a estética pela simplicidade

“General Theory of Relativity”, 1975

“The Principles of Quantum Mechanics”, 1930

“A Beleza é o Método”

- *“What makes the theory of relativity so acceptable to physicists in spite of its going against the principle of simplicity is its **great mathematical beauty**. This is a quality which cannot be defined, any more than **beauty in art** can be defined, but which people who study mathematics usually have no difficulty in appreciating. The theory of relativity introduced mathematical beauty to an unprecedented extent into the description of Nature.” (Dirac, 1939).*
- **A Matemática como legítimo instrumento de investigação da Natureza: superação dos limites da tecnologia de uma época.**
- **A simplicidade e a estética como critérios formais para a construção de uma teoria.**
- **O estruturalismo de Dirac através da obra de Bakhtin (crença e busca contínua pela **elementaridade**).**

A Tensão Pré-Diraqueana

- Cartan (série de aulas), 1913: **Teoria dos Espinores**
- Einstein, 1917: **Considerações cosmológicas na RG**
(Introdução da constante cosmológica; mas a origem?)

Helvetica Physica Acta 7 (1934) 709.

O clímax para a Equação de Dirac

3 partículas elementares: e , p , γ – *Nasce o Modelo-Padrão*

- Dirac, 1928 – 1931: **lançando as bases do Modelo-Padrão**

“The quantum theory of the electron - I” (2 JAN 1928) [*o problema de Pauli !*]

“The quantum theory of the electron - II” (2 FEV 1928)

“A theory of electrons and protons” (6 DEZ 1929): **90 anos do Vácuo Quântico**
vácuo quântico x constante cosmológica (*retornando a Einstein 1917!*)

Elementaridade ? “The Proton” (18 OUT 1930) – **prévia das anti-partículas**

Elementaridade ? “Quantised singularities in the e.m. field” (29 MAI ‘31)

pelos resultados deste trabalho recebe o Nobel de 1933:

“for the discovery of new productive forms of atomic theory”

- Weyl, 1929: “Elektron und Gravitation - I” (8 MAI 1929) [**Dirac, presente!**]
(*equação de Weyl para férmions de massa nula*)

[Dirac, presente!] A carta de Pauli e a proposta dos NUs

Physics Institute Zürich
of the ETH Gloriastrasse
Zürich

December 4, 1930

Dear Radioactive Ladies and Gentlemen,

As the bearer of these lines, to whom I graciously ask you to listen, will explain to you in more detail, because of the "wrong" statistics of the N- and Li-6 nuclei and the continuous beta spectrum, I have hit upon a **desperate remedy to save** the "exchange theorem" (1) of statistics and the law of conservation of energy. Namely,

*the possibility that in the nuclei there could exist electrically neutral particles, which I will call **neutrons**, that have **spin-1/2** and obey the exclusion principle and that further **differ from light quanta** in that they do not travel with the velocity of light. The mass of the neutrons should be of the same order of magnitude as the electron mass and in any event **not larger than 0.01 proton mass**.*

The continuous beta spectrum would then make sense with the assumption that in beta decay, in addition to the electron, a neutron is emitted such that the sum of the energies of neutron and electron is constant.

... Finalizando a carta de Pauli

... I admit that my remedy may seem almost improbable because one probably would have seen those neutrons, if they exist, for a long time.

But nothing ventured, nothing gained, and the seriousness of the situation, due to the continuous structure of the beta spectrum, is illuminated by a remark of my honored predecessor, Mr. Debye, who told me recently in Bruxelles:

"Oh, It's better not to think about this at all, like new taxes."

Therefore one should seriously discuss every way of rescue. Thus, dear radioactive people, scrutinize and judge. Unfortunately, I cannot personally appear in Tübingen since I am indispensable here in Zürich because of a ball on the night from December 6 to 7. With my best regards to you, and also to Mr. Back, your humble servant

- Signed W. Pauli.
- *[Translation: Kurt Riesselmann.]*

[Dirac, presente!] Fermi - 1933

- “Tentativo di una teoria dei raggi- β ”
La Ricerca Scientifica 2, fasc. 12, 1933.
- Adota a formulação da QED proposta por Dirac em '27, seu próprio (Fermi) paper de 1929 e elabora interação 4-férmions.
- Revê o limite de massa do NU proposto por Pauli.
- Estima a constante de acoplamento fraca, G_F .

Dirac, a ex-União Soviética e o Japão

- **1935**, o celebrado paper de **Yukawa** [**Dirac, presente!**]
“**On the interactions of elementary particles**”,
Prog. Theor. Phys. **17** (1935) 48.

Os trabalhos precedentes de Dirac são fundamentais para **Igor Tamm (Nobel 1958)** (o amigo extrovertido, tal como a **Sra. Margit**) propor o seu trabalho sobre as forças nucleares:

“**Exchange forces between neutrons and protons and Fermi’s theory**”
Nature 133 (1934) **981**, [**Dirac, presente!**],
que foi crucial para o trabalho acima de Yukawa.

[Tamm foi o Referee do paper-I da Equação de Dirac.]

Viagens à URSS e Japão: 1929, ‘30, ‘32, ‘33, ‘35, ‘36, ‘37, ‘38, ‘56, ‘65, ‘73.

“Les transformations de jauge em Eléctrodynamique”
Annales de l'Institut Henri Poincaré

Importante informação:

Sonja Ashauer, brasileira, defende seu Doutorado em Cambridge, em 1948, sob a orientação do Prof. Dirac, com um trabalho sobre a grande teoria que estava sendo gestada, a **Eletrodinâmica Quântica**.

Um grande marco: A Era Yang-Mills-Shaw

- Ronald Shaw <R.Shaw@hull.ac.uk>:

Dear José,

.....

..... A footnote on p.37 of Part II of my dissertation reads:

"The work described in this chapter (Ch.III) was completed, except for its extension in Section 3, in January 1954, but **was not published**. In October 1953, Yang and Mills adopted independently the same postulate and derived similar consequences."

But, although their publication date was in June 1954, Yang and Mills must have priority since it seems that their research was completed in 1953. [But see (*) at the end of this subsection.]

The idea for Chapter III of Part II came to me in a flash while reading a manuscript of Schwinger's, which I found left lying around in the Philosophical Library in Cambridge. In it Schwinger showed how invariance of the Lagrangian under general gauge transformations required the introduction of the electromagnetic field. This of course was not new (though possibly it was to me at that time), but Schwinger's manuscript used real spinors, and so the usual $U(1)$ invariance appeared instead as $SO(2)$ invariance. Being familiar with Kemmer's work on invariance under "special" isotopic spin transformations it seemed to cry out to see what would happen if I changed Schwinger's (abelian) $SO(2)$ to the (non-abelian) isospin $SU(2)$.

Um grande marco: A Era Yang-Mills-Shaw

I showed my generalization to Salam in early 1954, but in a rather disparaging way, since I did not doubt at that stage that the new non-abelian gauge fields would require particles to have zero mass, and such particle did not appear to exist in nature. Later on in 1954, Salam showed me the paper by Yang and Mills. Salam still wanted me to publish my contribution, but I never did. On many occasions (the 1962 Istanbul Summer School on Group Theory in Physics, the Schrodinger Centenary Conference at Imperial College in 1987, ...) he publicised my independent discovery. In his Nobel Prize Lecture 1979, reprinted in Rev. Modern Phys. 52 (1980), 525-538, there are (see below) several references to Yang-Mills-Shaw theory. I have also recently come across **a letter from Salam to me dated 1 Oct 1988** (in connection with the submission of a paper of mine to Proc. Roy. Soc.) in which he again refers to Yang-Mills-Shaw theory, and reminds me:

"I still remember asking you to publish this and you were very shy at that moment because you thought Yang-Mills had published it already although you had done the work independently."

However most physicists just refer to Yang-Mills theory --- and actually I am quite glad of this! *I like a quiet life, and would not have enjoyed being pestered throughout the decades by lots of queries from researchers expecting me to be up to date with latest developments.*

Um grande marco: A Era Yang-Mills-Shaw

- **Yang – Mills, 28 JUN 1954:**
“Conservation of Isotopic Spin and Isotopic Gauge Invariance”
Phys. Rev. **96** (1954) 191 (publicado em 1º OUT 1954).
- Nas conclusões do paper (“**Properties of the b-quanta**”), a questão crucial: o **gap de massa**. (*Um dos problemas do Século XX.*)
- O paper ainda “não arrebatou a platéia”. **Por quê?**

 - ***Flip de quiralidade nas interações tipo-Yukawa;***
 - ***O papel dos escalares nas massa fermiônicas; mas ...***

“Conselho” de Pauli a Salam

- **Salam, 1956:**

“.....I gave Prof. Villars my paper. He returned the next day with a message from the Oracle (Pauli):

“Give my regards to my friend Salam and tell him to think of something better”.

*This was discouraging, but I was compensated by Pauli’s excessive “kindness” a few months later, when **Mrs. Wu’s, Lederman’s** and **Telegdi’s** experiments were announced showing that **left-right symmetry was indeed violated** and ideas similar to mine about chiral symmetry were expressed independently by Landau and Lee and Yang . I received Pauli’s first somewhat apologetic letter on 24 January 1957.”*

[Dirac, presente!] A Eletrodinâmica de bósons vetoriais carregados

Um problema nada trivial: matéria carregada com spin-1.

- **Komar e Salam, 1960:**
“Renormalisation problem for vector meson theories”
Nucl. Phys. 21 (1960) 624.
- **Lee e Yang, 1962:**
“Theory of charged vector mesons interacting with the e. m. field”
Phys. Rev. 128 (1962) 885.
- **Salam, 1963:**
“Renormalisable Electrodynamics of Vector Mesons”
Phys. Rev. 130 (1963) 1287.

Resultados inconclusivos: alguma perturbadora inconsistência.

O que poderia estar faltando?

O que estariam indicando os acoplamentos não-mínimos?
